

Same states, different transition families, different prediction error

Cycle

1 action: $i \rightarrow i+1 \bmod 8$

gain 1.00 | L=1 MSE 0

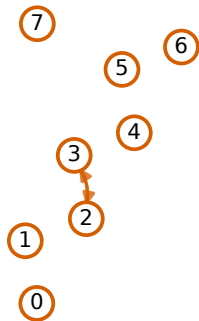

Adjacent pair actions

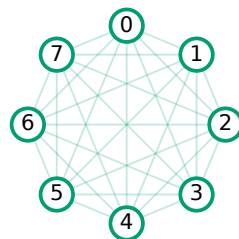

7 actions: one neighboring pair

gain 1.56 | L=1 MSE 0.094

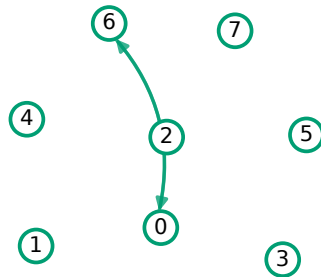

All-pair actions

28 actions: any unordered pair

gain 2.32 | L=1 MSE 0.269

transition family

m=2 latent action
