

Actual latent distributions in one, two, and three dimensions

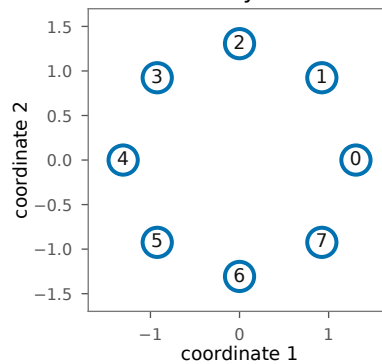

m=1: line

gain = 2.35
seed 2

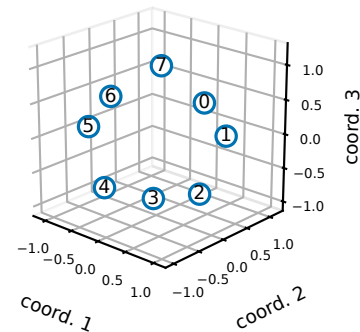

m=2: plane

exact gain = 1.00
analytic

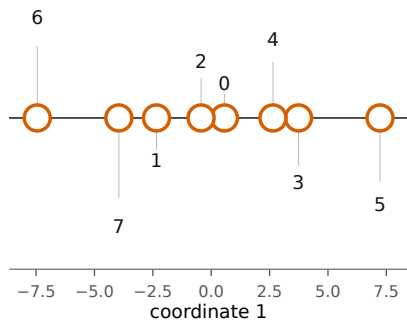

m=3: three coordinates

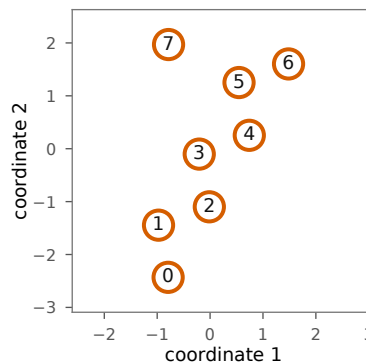

gain = 1.00
seed 6

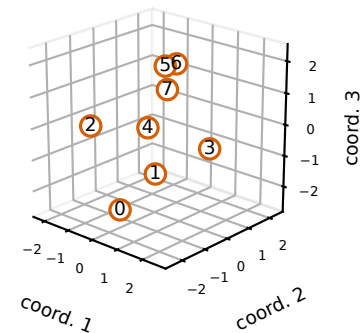

gain = 3.21
seed 5

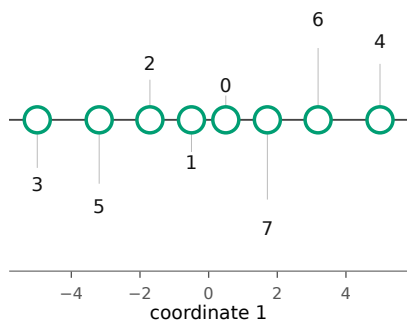

gain = 1.56
seed 9

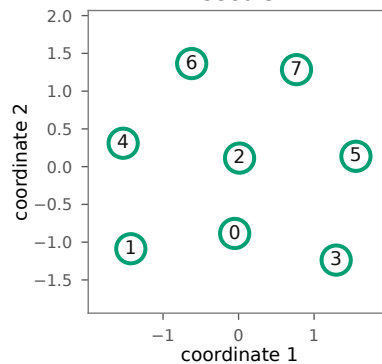

gain = 1.31
seed 0

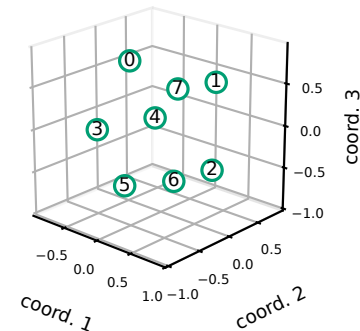

gain = 5.54
seed 2

gain = 2.32
seed 5

gain = 1.56
seed 7

Same eight states + different transition families + added coordinates -> different point geometries -> different required gains

Cycle

Adjacent transpositions
